Demographic analysis and forecasts
Supplementary notes

The unemployment figures used in this report for sensitivity testing are based on Office for National Statistics (ONS) Annual Population Survey data, retrieved through the ONS NOMIS service. Unemployment rates are calculated based on the proportion of economically active people aged 16 to 64.

The council will produce an addendum to the report to provide additional information and to clarify the position regarding the drop international migration figures (presented in Figure 3, Page 6 of the report) following the year 2010/11.

The addendum will additionally provide further information on commuting trends between North East Lincolnshire and other areas, following the publication on additional Census tables. This will identify key commuting linkages between North East Lincolnshire and other local authority areas.
