

Alcohol and Other Drugs Survey Results - 131 responses

As part of the ongoing work to provide alcohol and other drugs services that are useful and easily accessible to people living in North East Lincolnshire, we carried out a survey earlier in the year. The reason for the survey was to find out what people knew and thought about the different services in the area. The survey asked five questions:

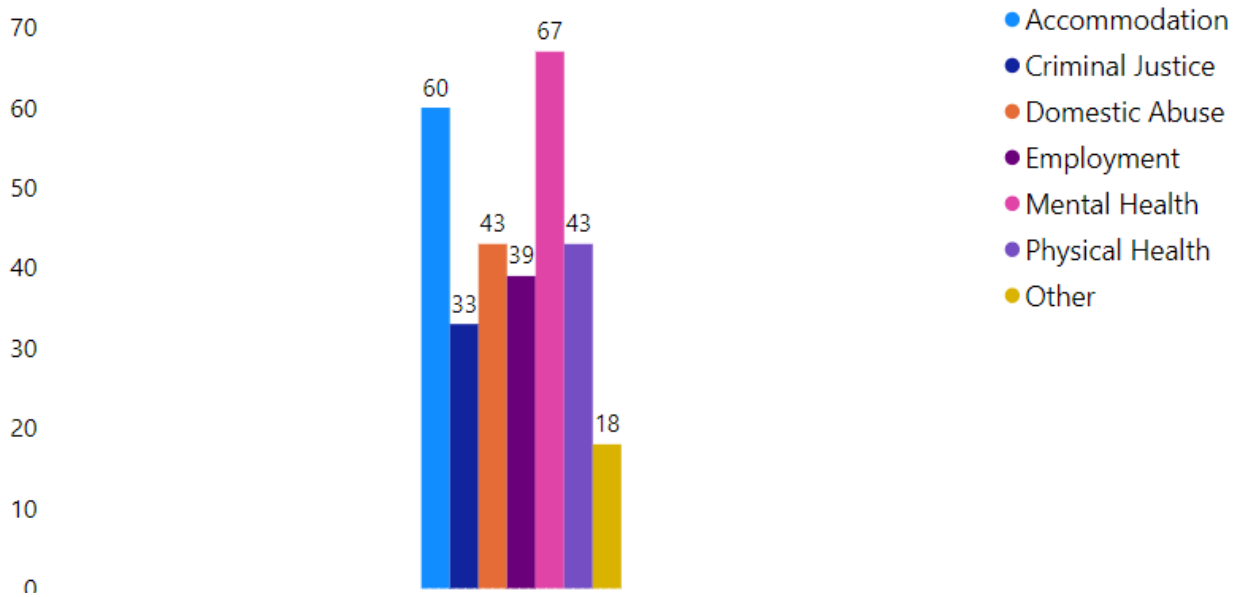

1. Are you aware of what local alcohol and drug services offer?
2. Is there any support you think alcohol or drugs services should provide that they currently don't?
3. Do alcohol and drug services fail to support any groups of people?
4. What would be needed to make local alcohol and drug services better?
5. How would you prefer to ask for support if you personally had a problem with alcohol or drugs? - What would be your first step?

The following are the results in charts with some explanation of some of the details provided by those who took part in the survey

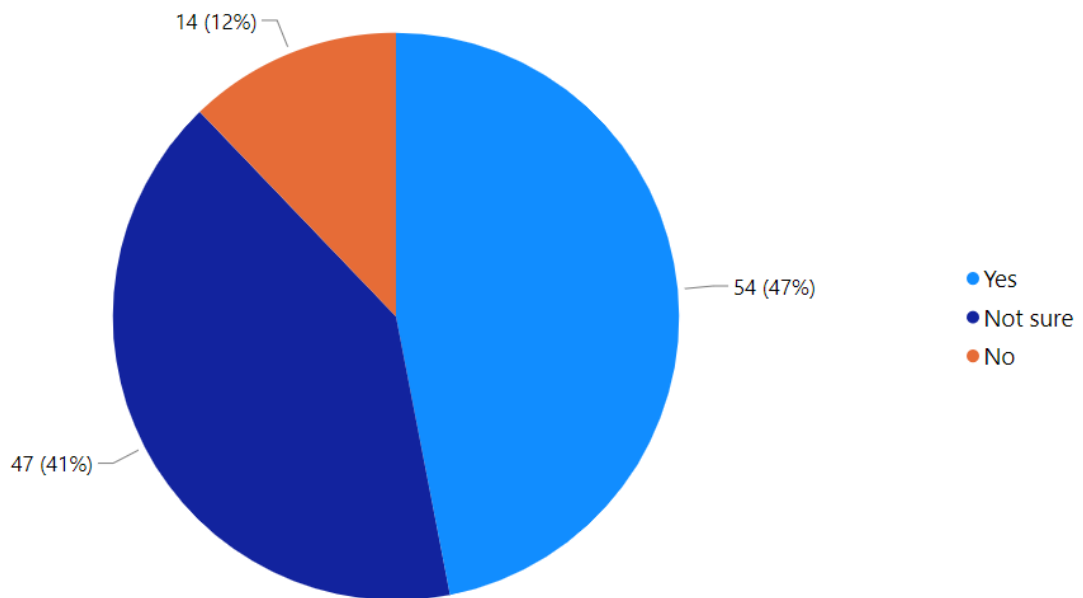

1. Are you aware of what local alcohol and drug services offer?

2. Is there any support you think alcohol or drugs services should provide that they currently don't?

3. Do alcohol and drug services fail to support any groups of people?

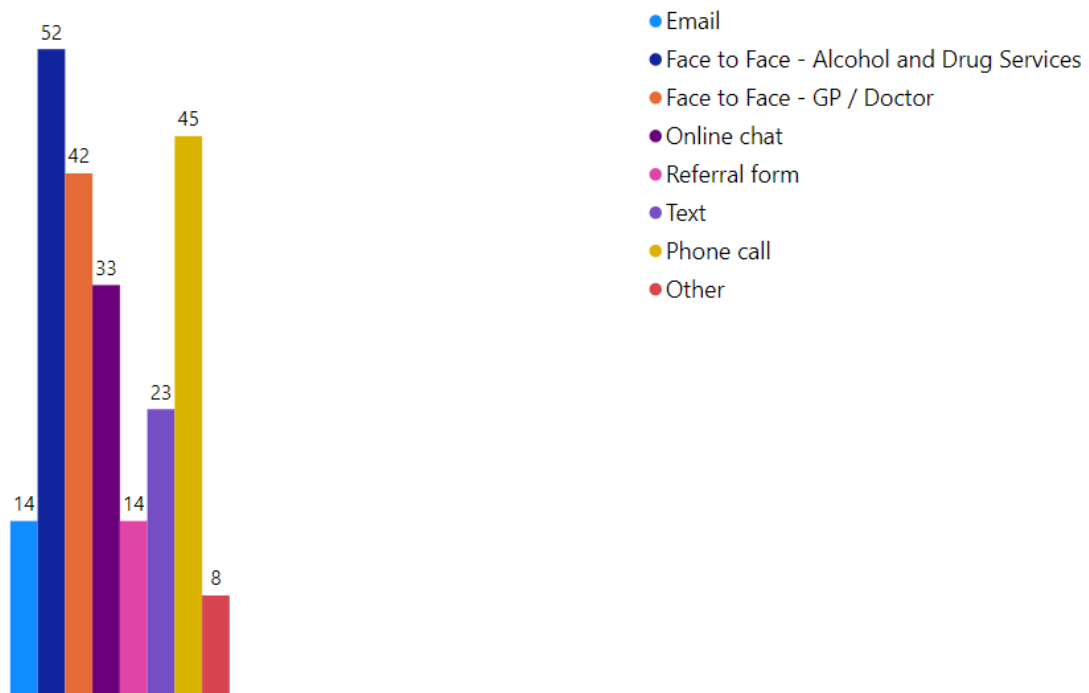

The narrative feedback received from this question will be used in the Combatting Drugs Partnership baseline needs assessment and subsequent action/delivery plan.

4. What would be needed to make local alcohol and drug services better?

As with question 3 the narrative feedback received from this question will be used in the Combatting Drugs Partnership baseline needs assessment and subsequent action/delivery plan.

5. How would you prefer to ask for support if you personally had a problem with alcohol or drugs? - What would be your first step?

As with question 3 and 4 the narrative feedback received from this question will be used in the Combatting Drugs Partnership baseline needs assessment and subsequent action/delivery plan.
