# Bedding

Quality begins from the ground up. The expert team at Maylim Landscapes has been hard at work shaping the new planting beds with high-grade imported soil, creating the perfect environment for the trees, shrubs, and vibrant plants set to be introduced in the next few weeks.

# The Water Tank

Maylim has successfully installed a 35m³ tank as a foundational piece of infrastructure for the water play area. This high-capacity tank is entirely integral to the project, driving the continuous water flow that powers the interactive play features.

Works have commenced on the infrastructure's central pump room. This purpose-built facility will house the advanced filtration systems required to guarantee pristine water quality and continuous circulation throughout the play area.

# The Water Tank

# The Boulders

**Looking ahead** to the end of October and throughout November, works will focus on the precision construction of the tiered boulders.

This architectural feature will form the structural heart of the water play area, artfully directing the flow of water across the landscape.

Live aerial progress links.

# Aerial Progress

# Pier Gardens Site Plan

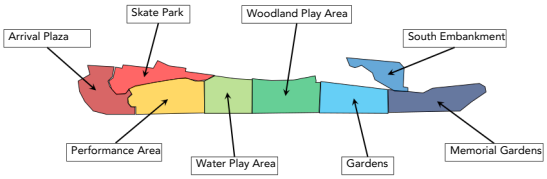

Pier Gardens is closed to public as per the plan below. The surrounding footpaths will remain open, with exception to the vehicle entrances to the site on Alexandra Road & Central Promenade. Traffic Marshalls will be present during all vehicle access to the site.

## A reminder of what's coming

# Meet The Team

If you have any queries regarding the works at Pier Gardens, please don't hesitate to get in touch with the relevant member of Maylim's project team:
